

Coil Pot

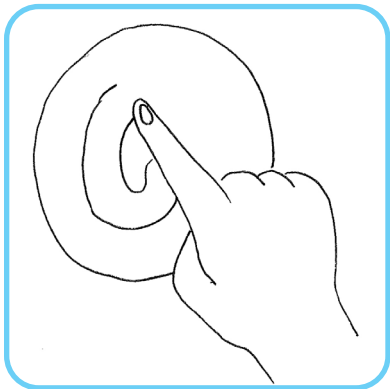

1. Squeeze your clay into a log shape.

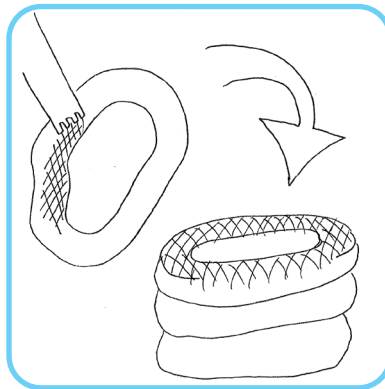

2. Roll the log of clay between your hand and the table into a long snake shape. This is called a coil.

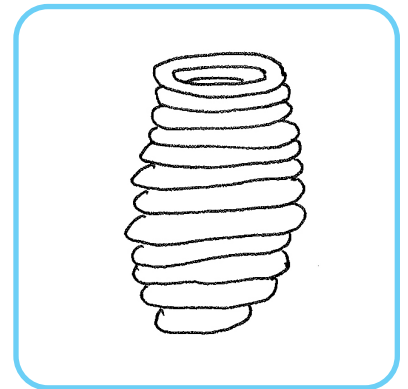

3. You can create a spiral with your coil to make a flat bottom for your pot.

4. Rub your finger over the coils to connect them for the bottom.

5. Scratch and attach a coil to the edge of your bottom to make walls for your pot (see [Scratch and Attach](#)).

6. Keep adding coils until your pot is as tall as you want.

7. Smooth out the coils on the inside to connect them.
